AETERDERM®

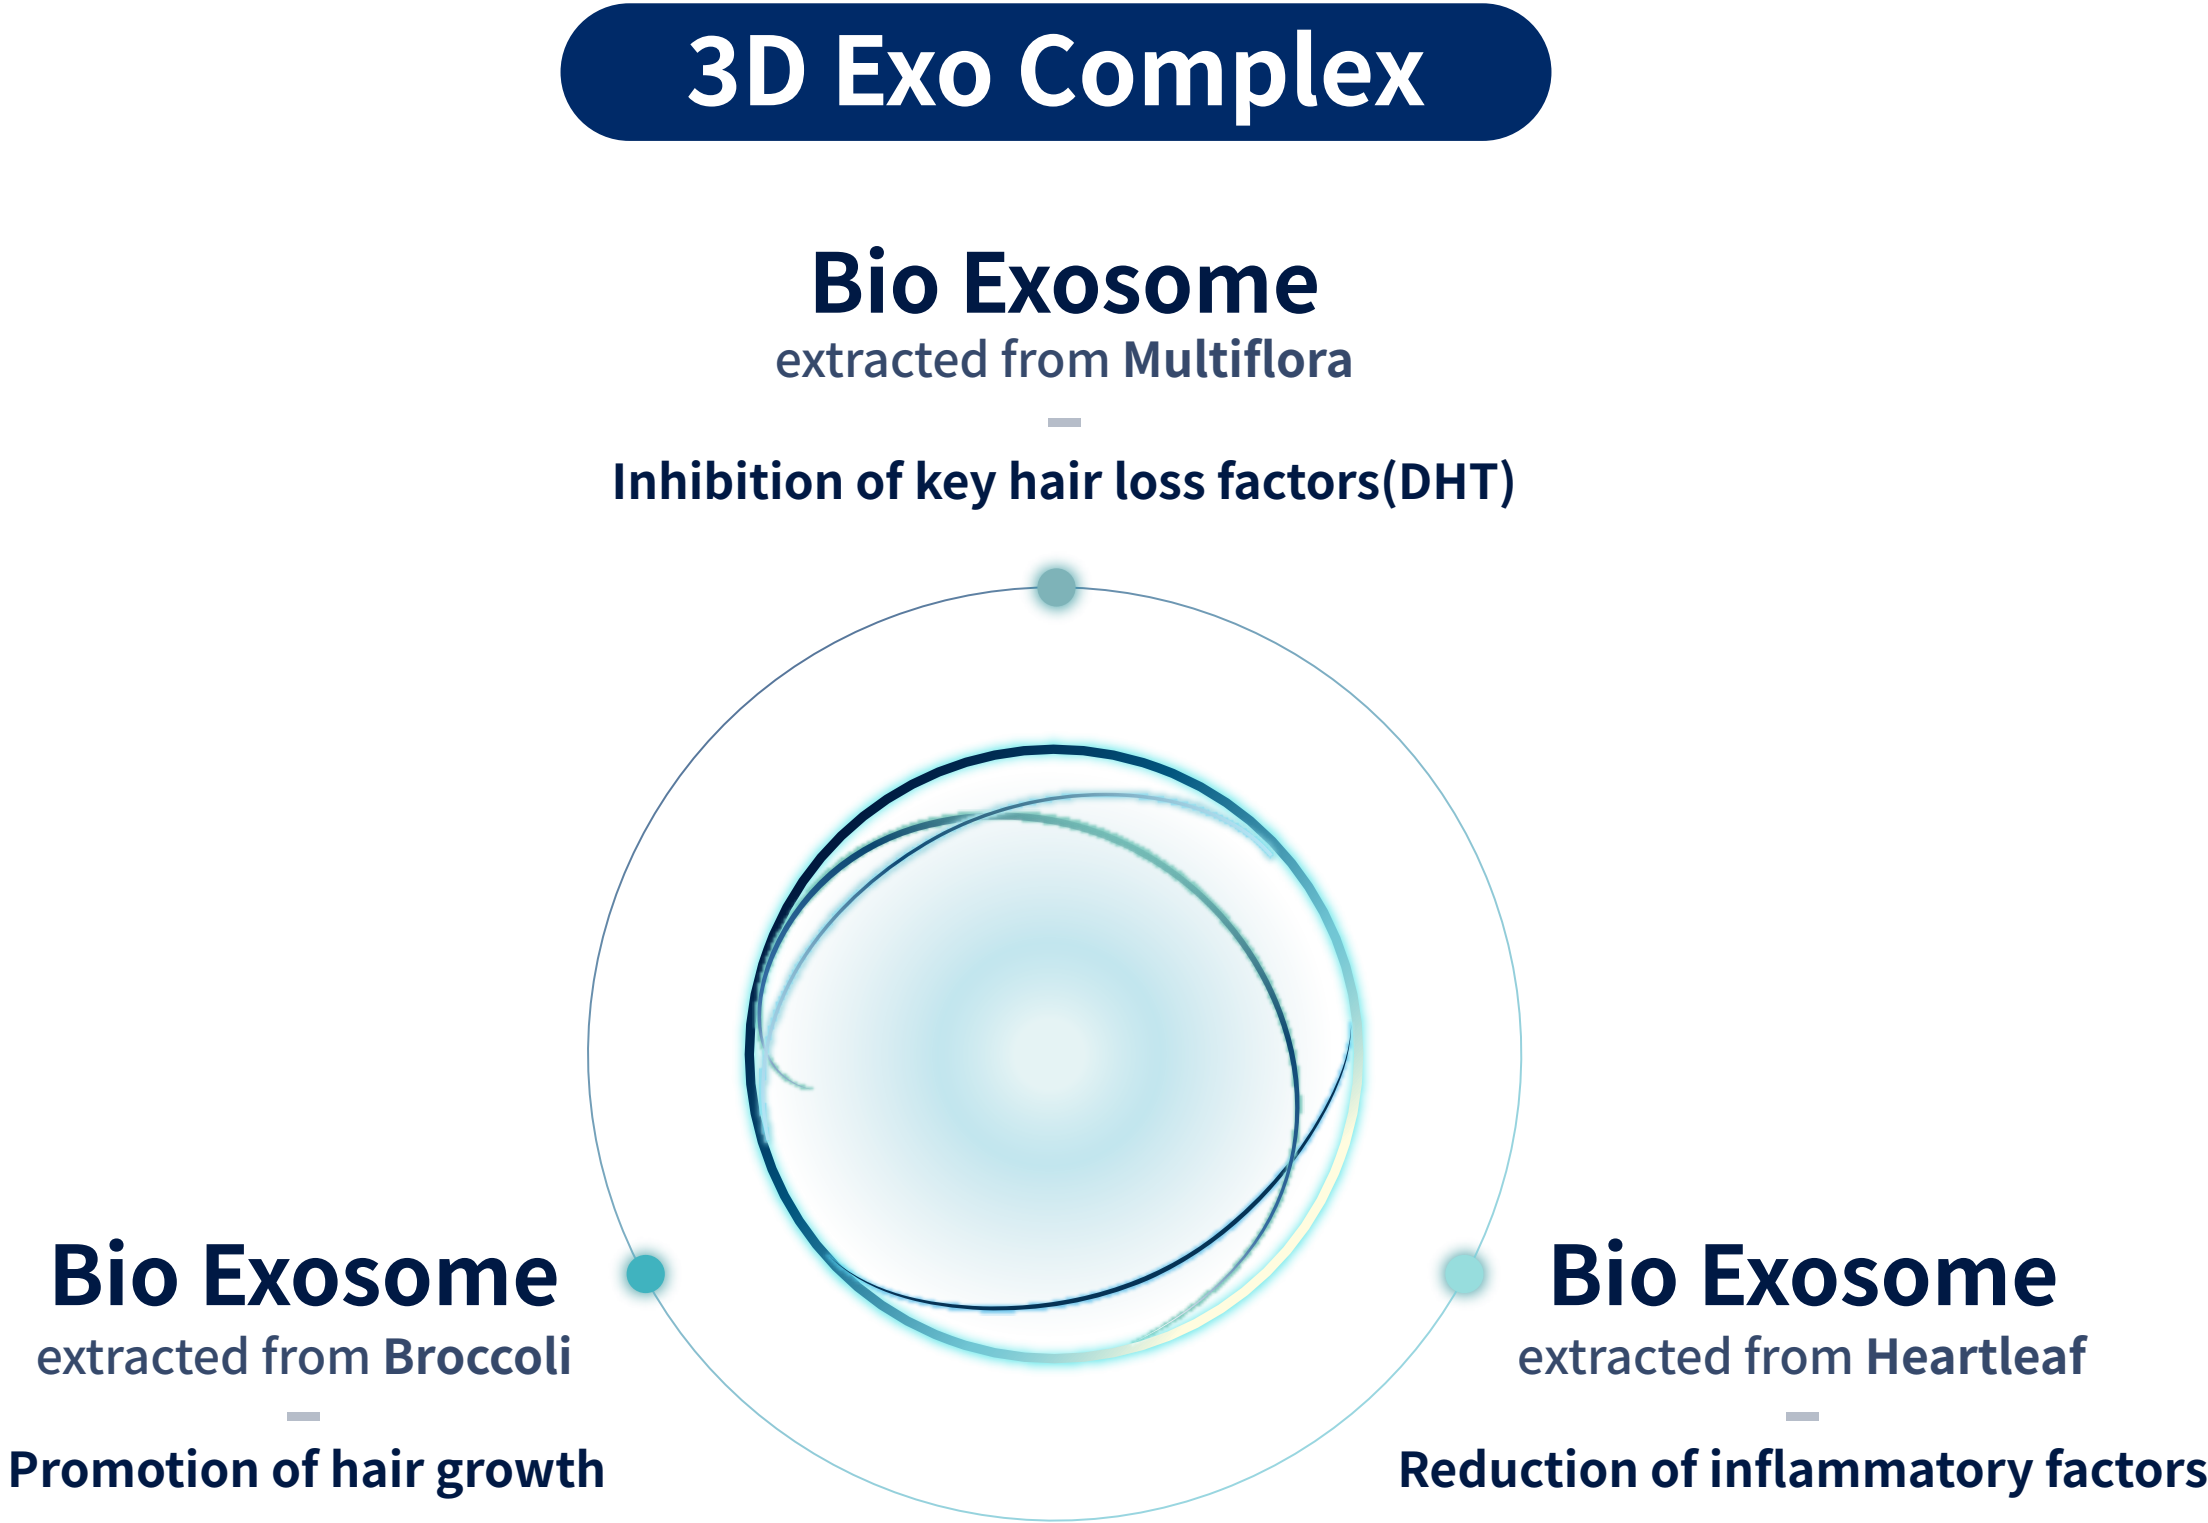

HAIRIZ

HAIRIZ treatment involved in All Cellular Processes

HAIRIZ is involved in the entire process of hair loss cellular activity, suppressing all pathogenic factors and providing overall improvement.

Key Mechanism of Hair Loss

HAIRIZ 3D Exo Hair Scalp Care Filler

Improvement of overall cellular mechanisms

HAIRIZ's Anti Hair-loss complex

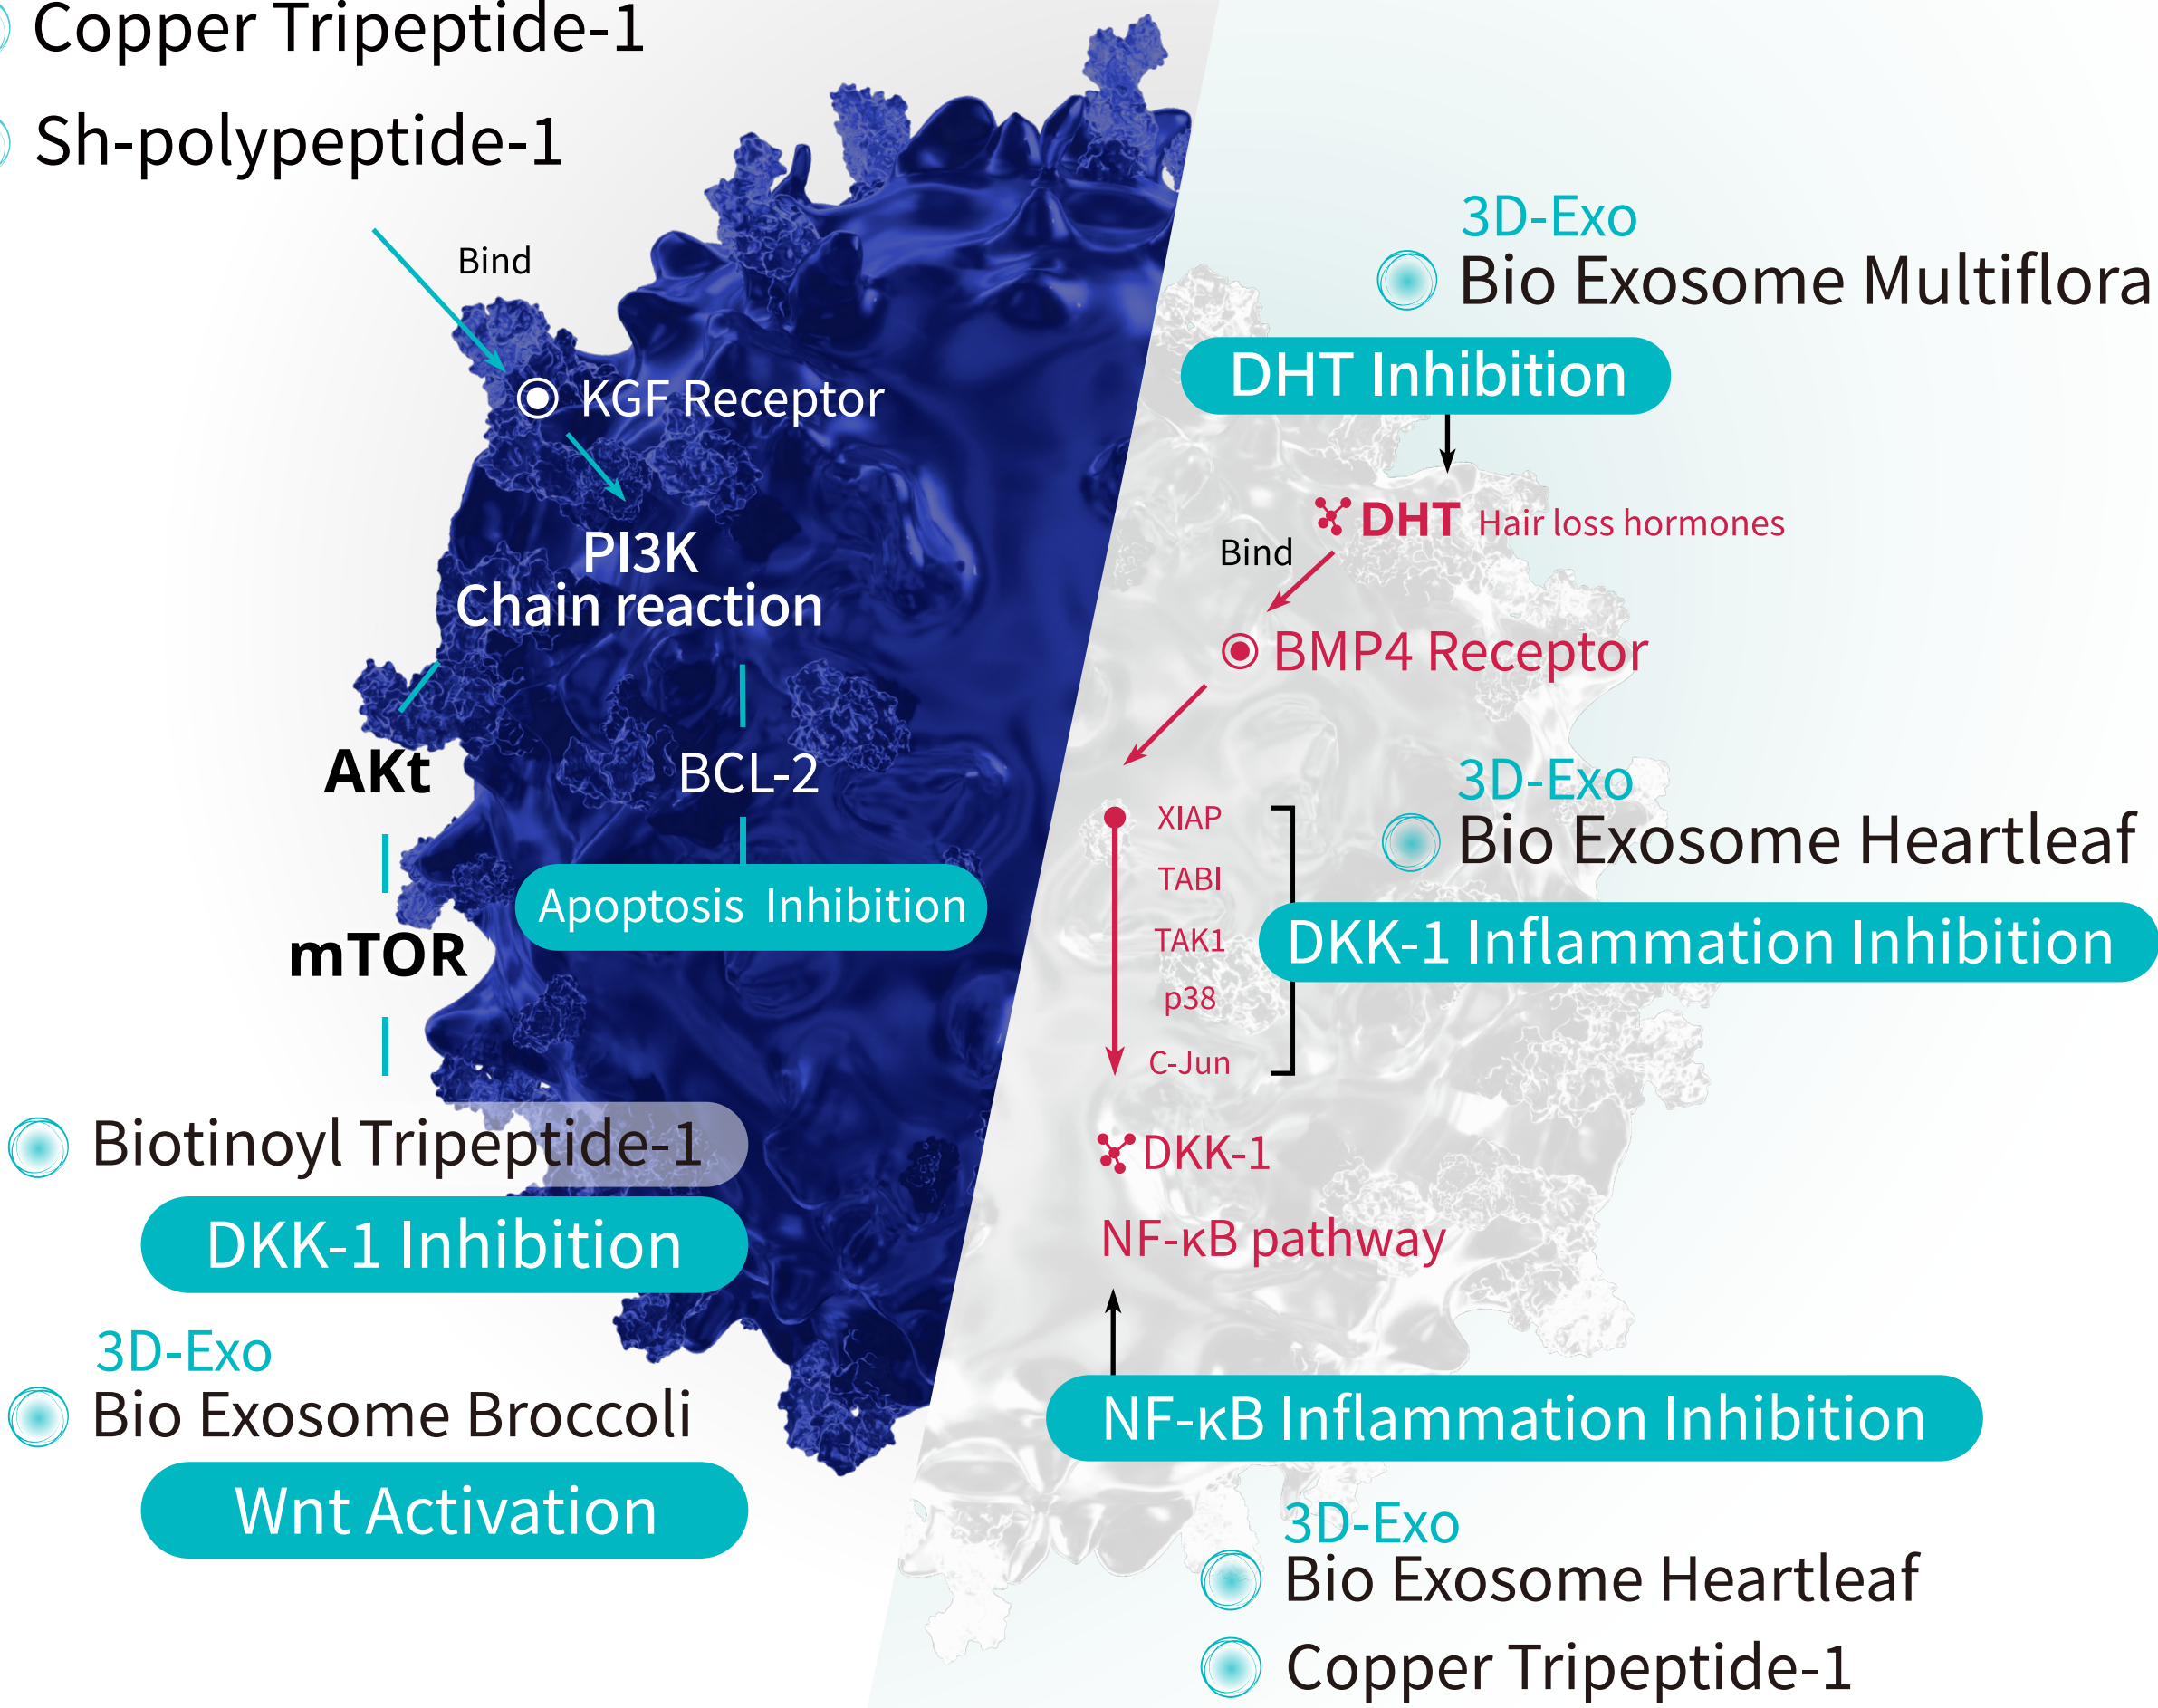

was developed through **In-depth Research** and a **Complete Understanding** of the cellular mechanisms behind hair loss,

to Change the Overall Direction of Cellular Activity

Supports

Hair Growth Chain Reactions

- Copper Tripeptide-1
- Sh-polypeptide-1

Inhibits

Inflammatory Cellular Process

It is designed to support positive cellular activity (Wnt pathway), suppress inflammatory cellular activity, prevent apoptosis, and revitalize the cells.

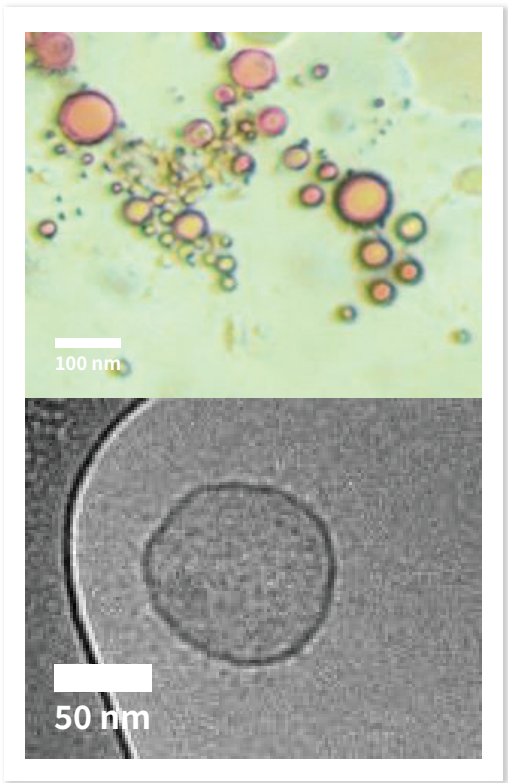

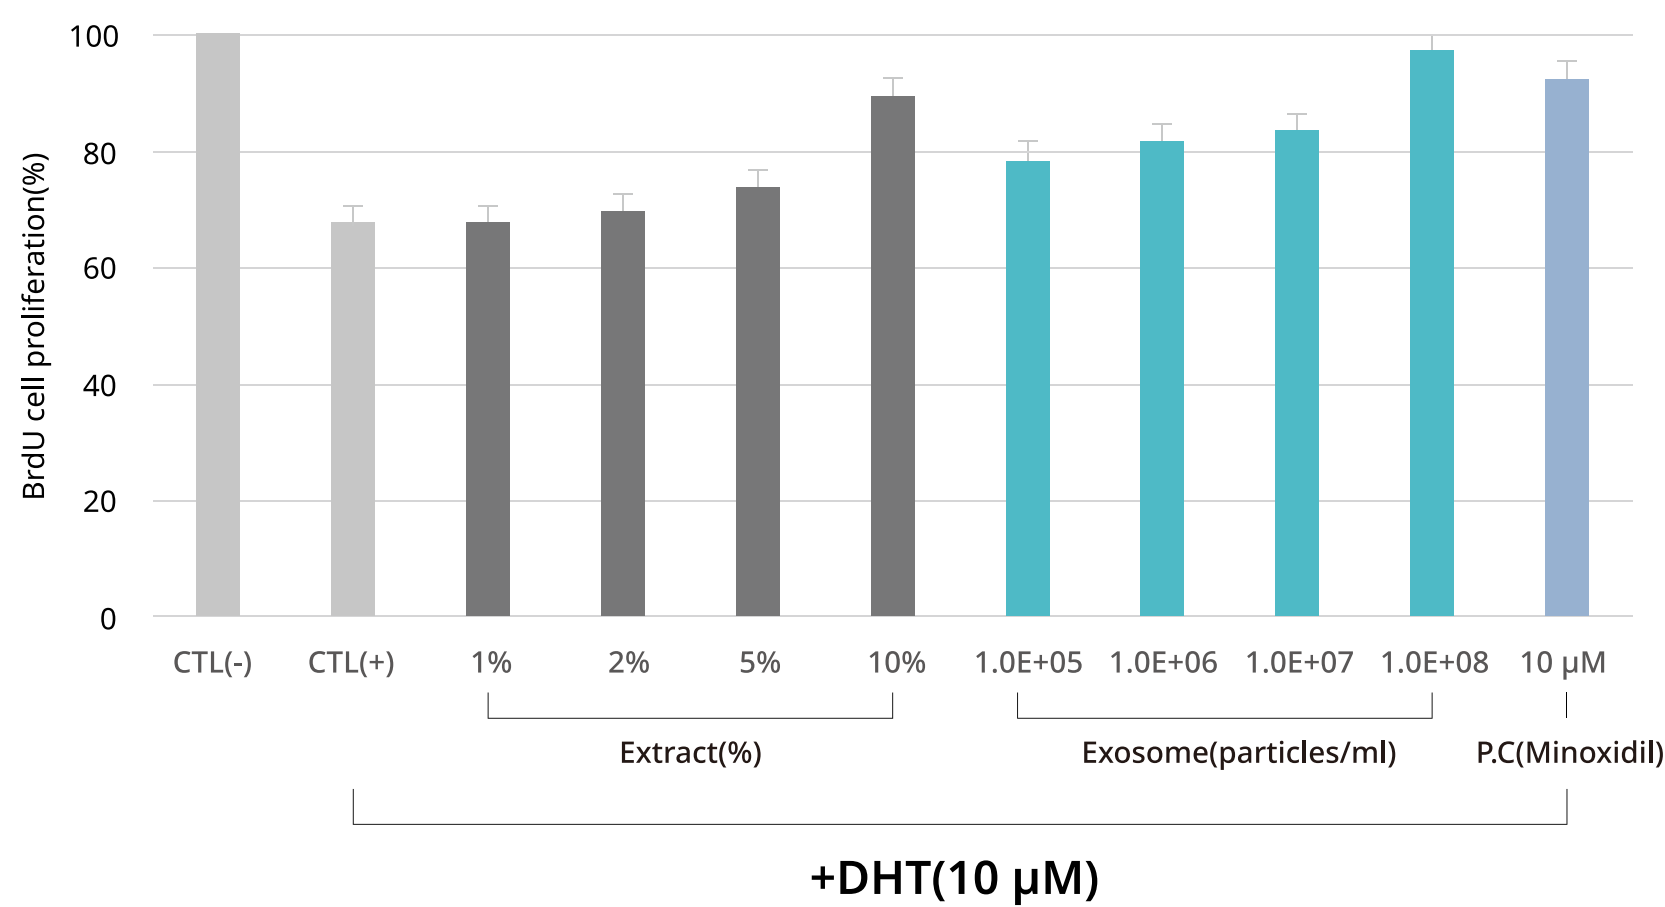

3D-Exosome Complex Clinical Trial

Clinical trial results that suppress DHT, the main cause of hair loss, and promote hair follicle cell growth

Multiflora Bio Exosome

Proliferates hair follicle cells by inhibiting DHT

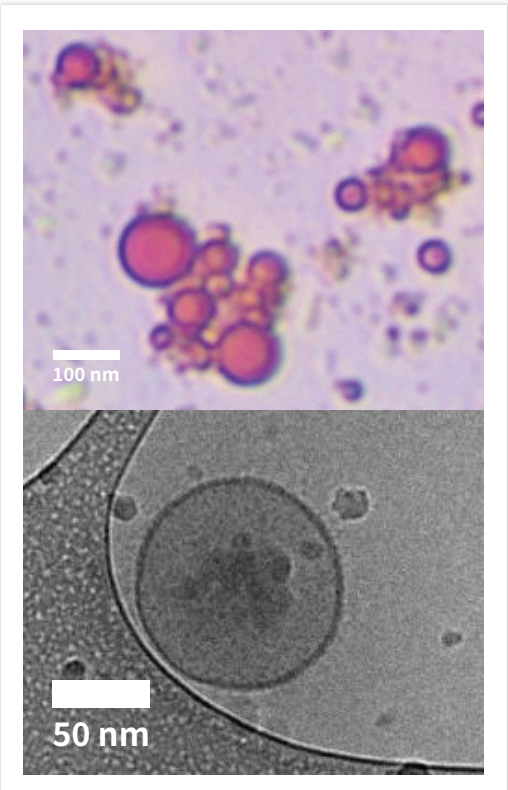

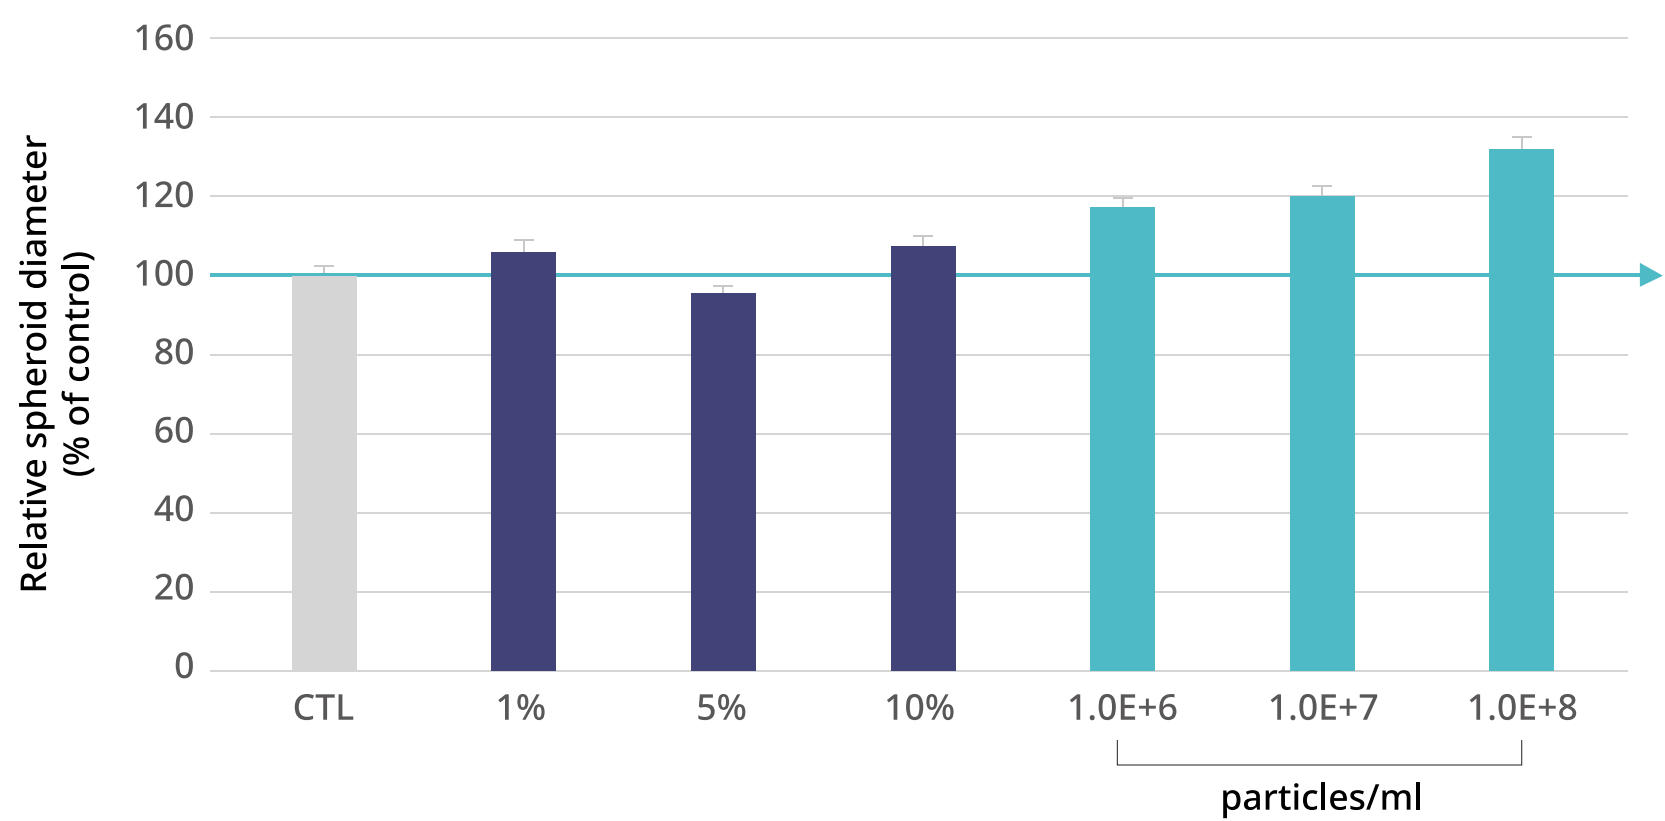

Cell : Human follicle dermal papilla cell (HFDPC)
Samples : Multiflora Extract
Multiflora Exosome
Minoxidil

Broccoli Bio Exosome

Hair follicle cells proliferation experiment data

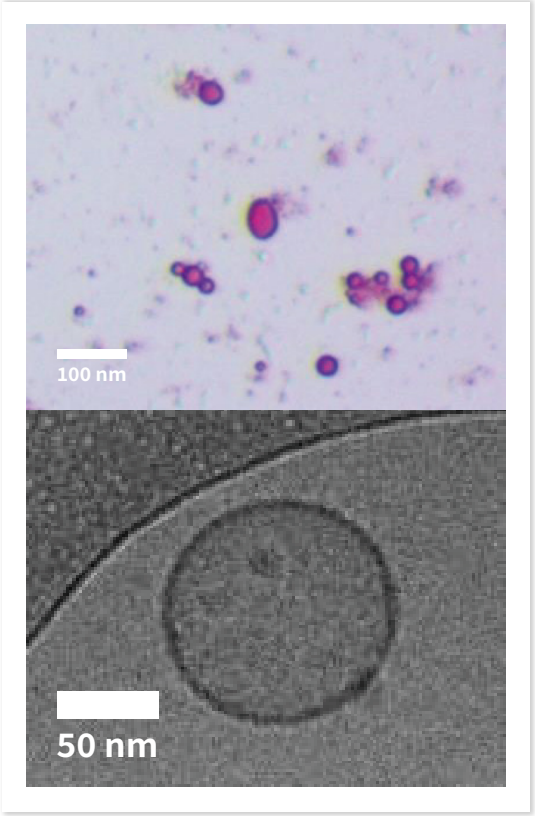

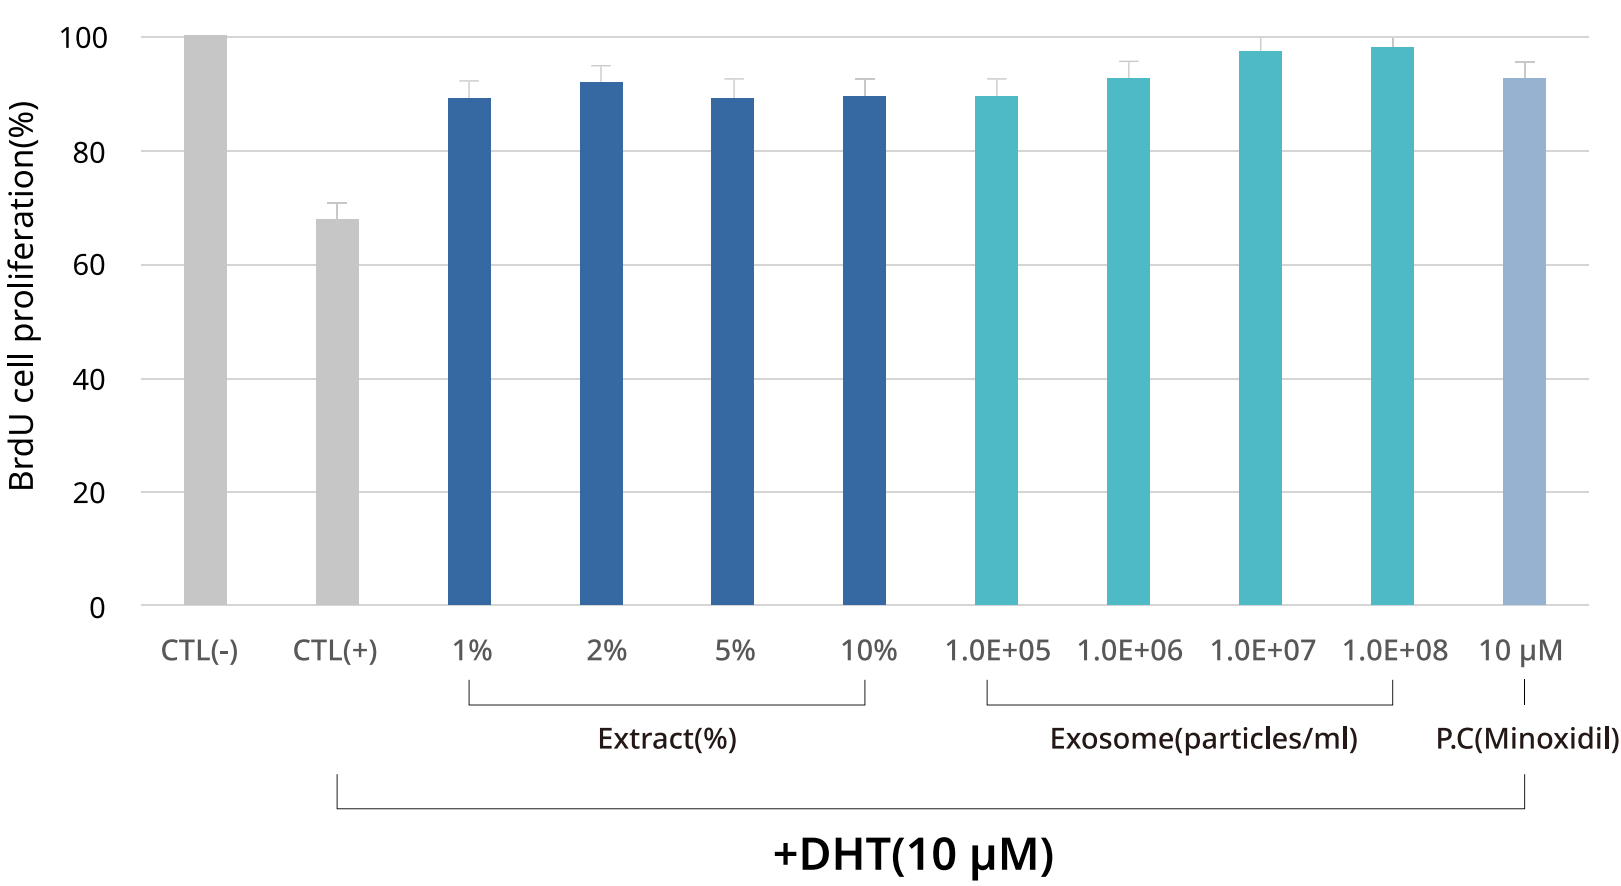

Cell : Human follicle dermal papilla cell (HFDPC)
Samples : Broccoli Extract
Broccoli Exosome

Heartleaf Bio Exosome

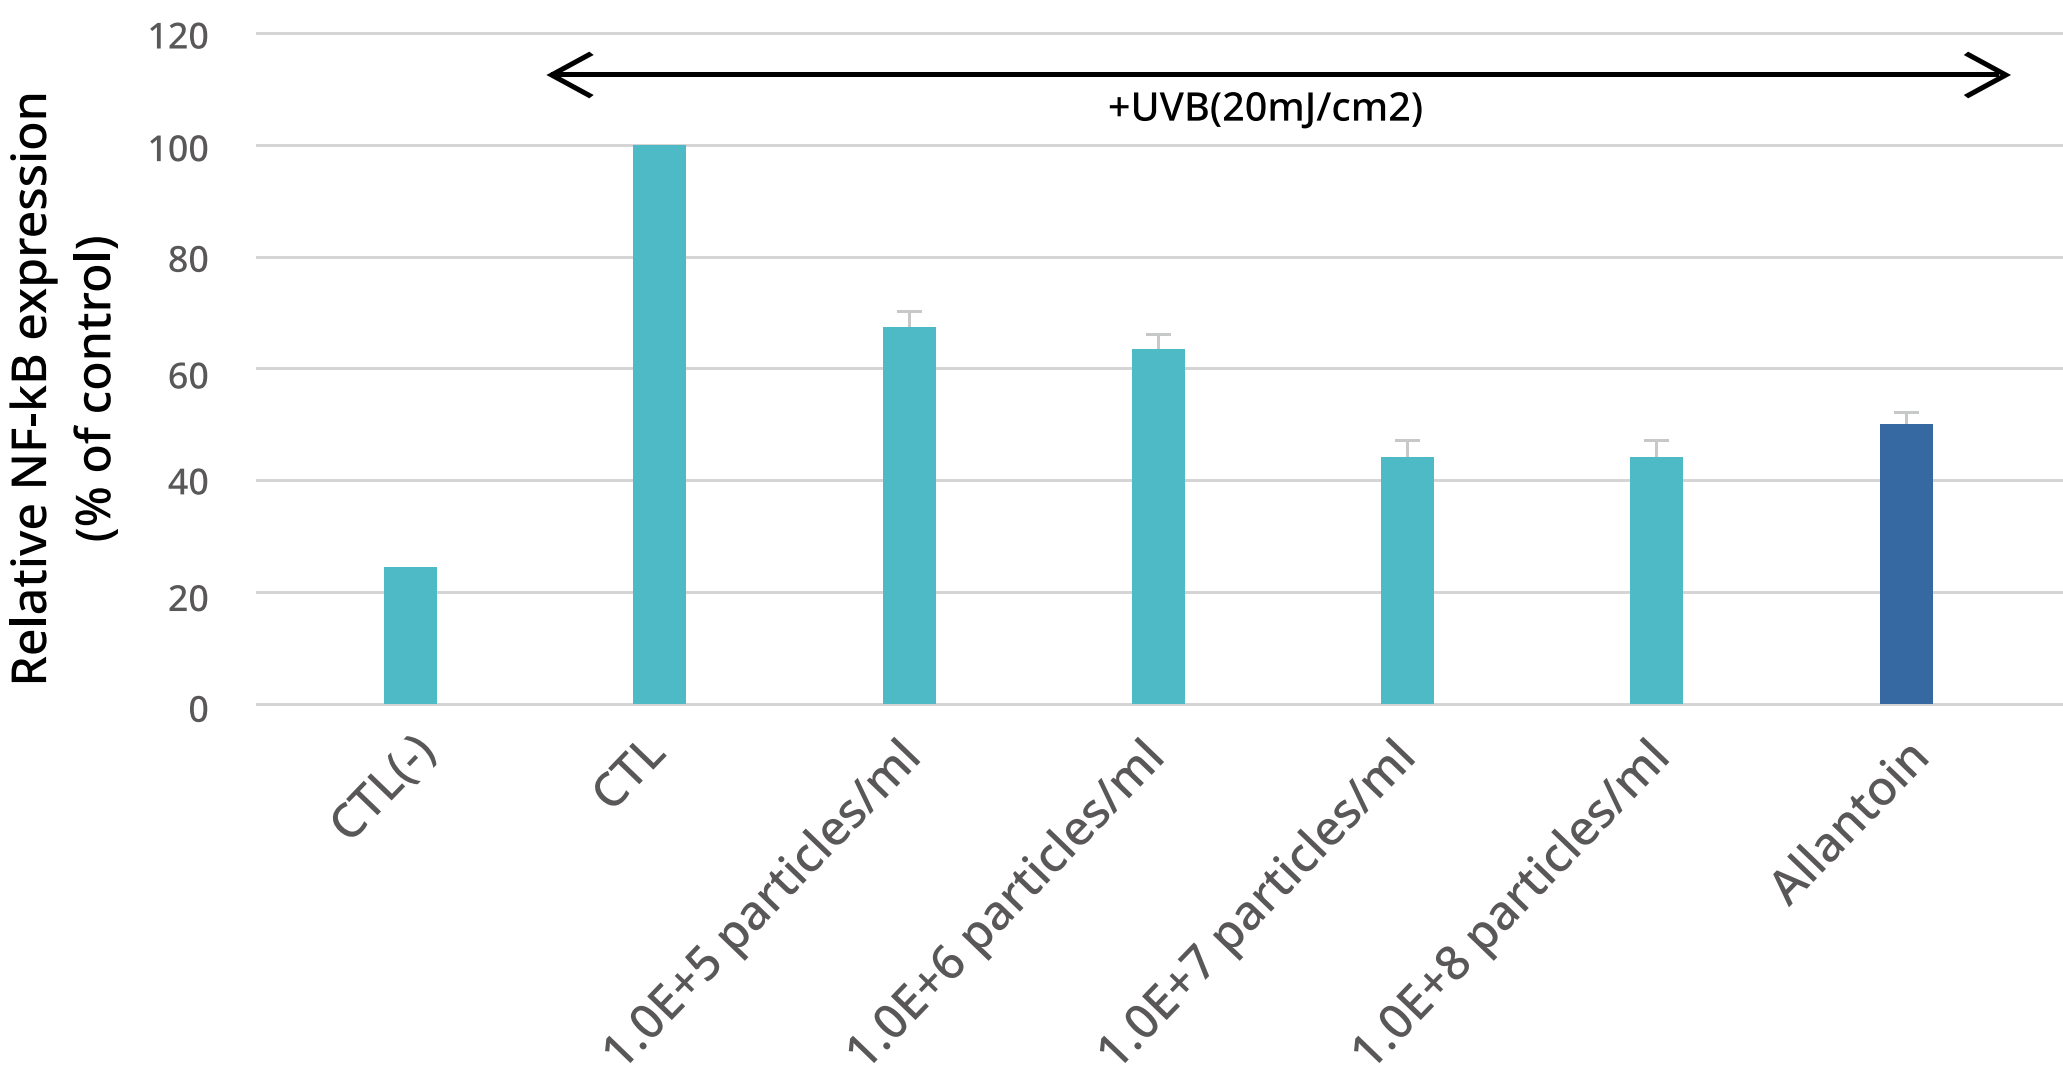

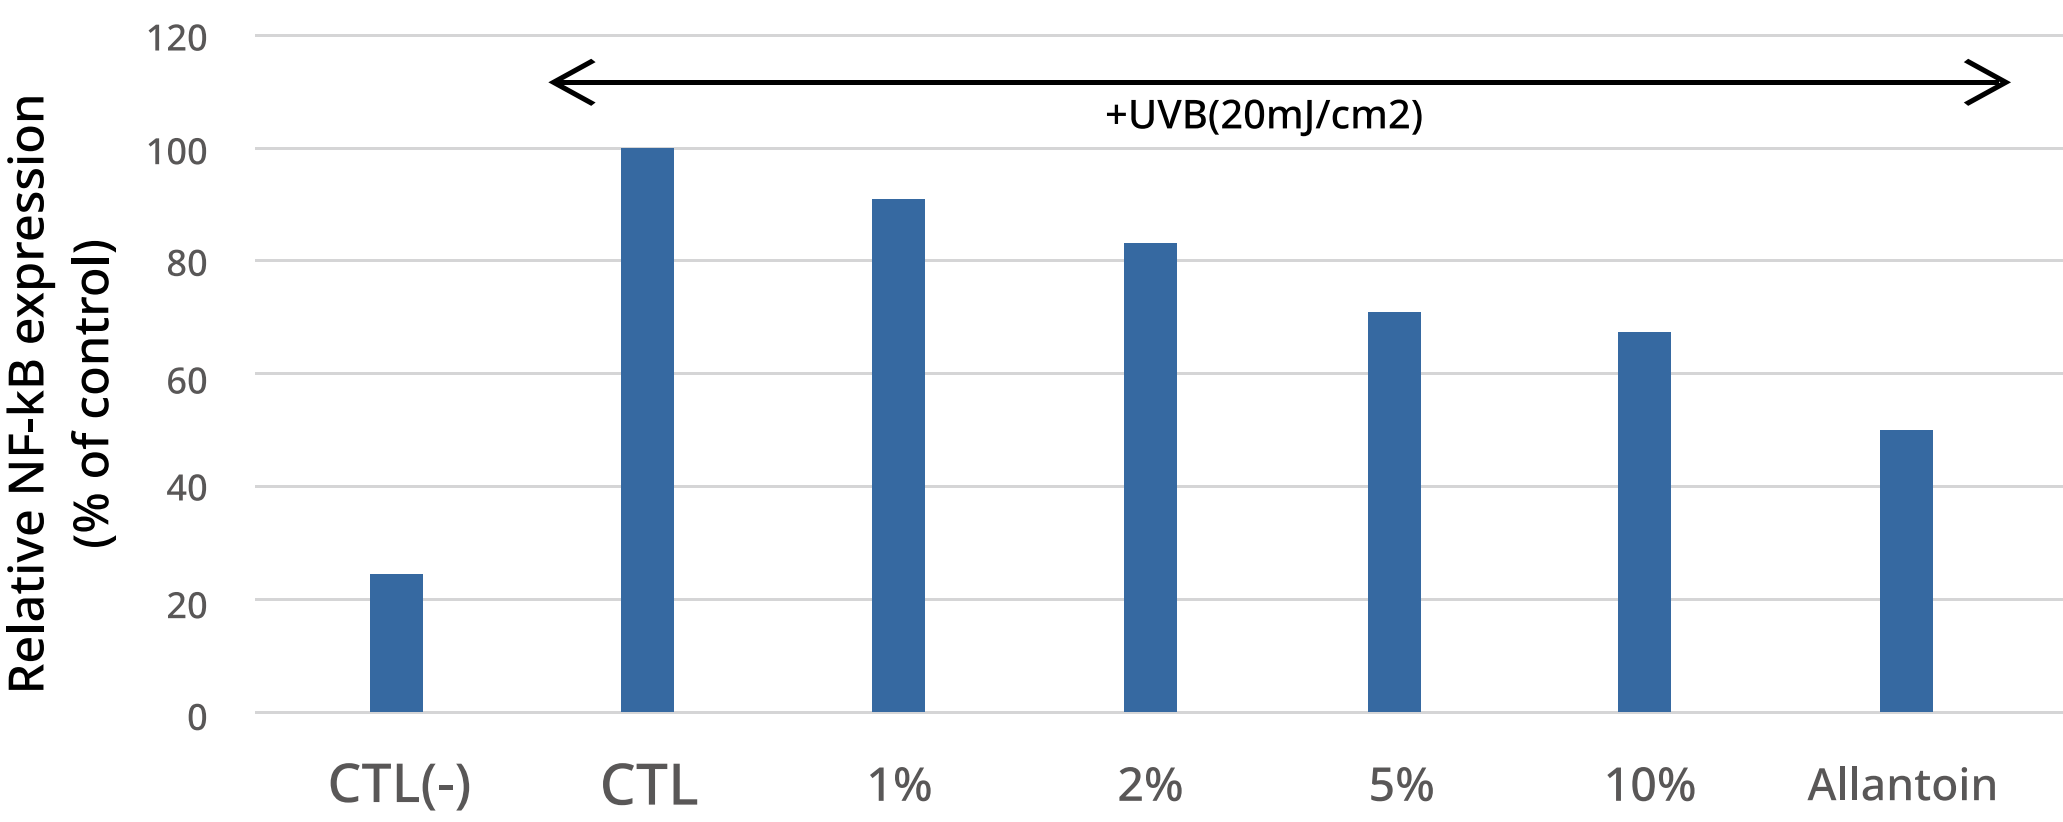

Proliferates hair follicle cells by inhibiting DHT

Cell : Human follicle dermal papilla cell (HFDPC)
Samples : Heartleaf Extract
Heartleaf Exosome
Minoxidil

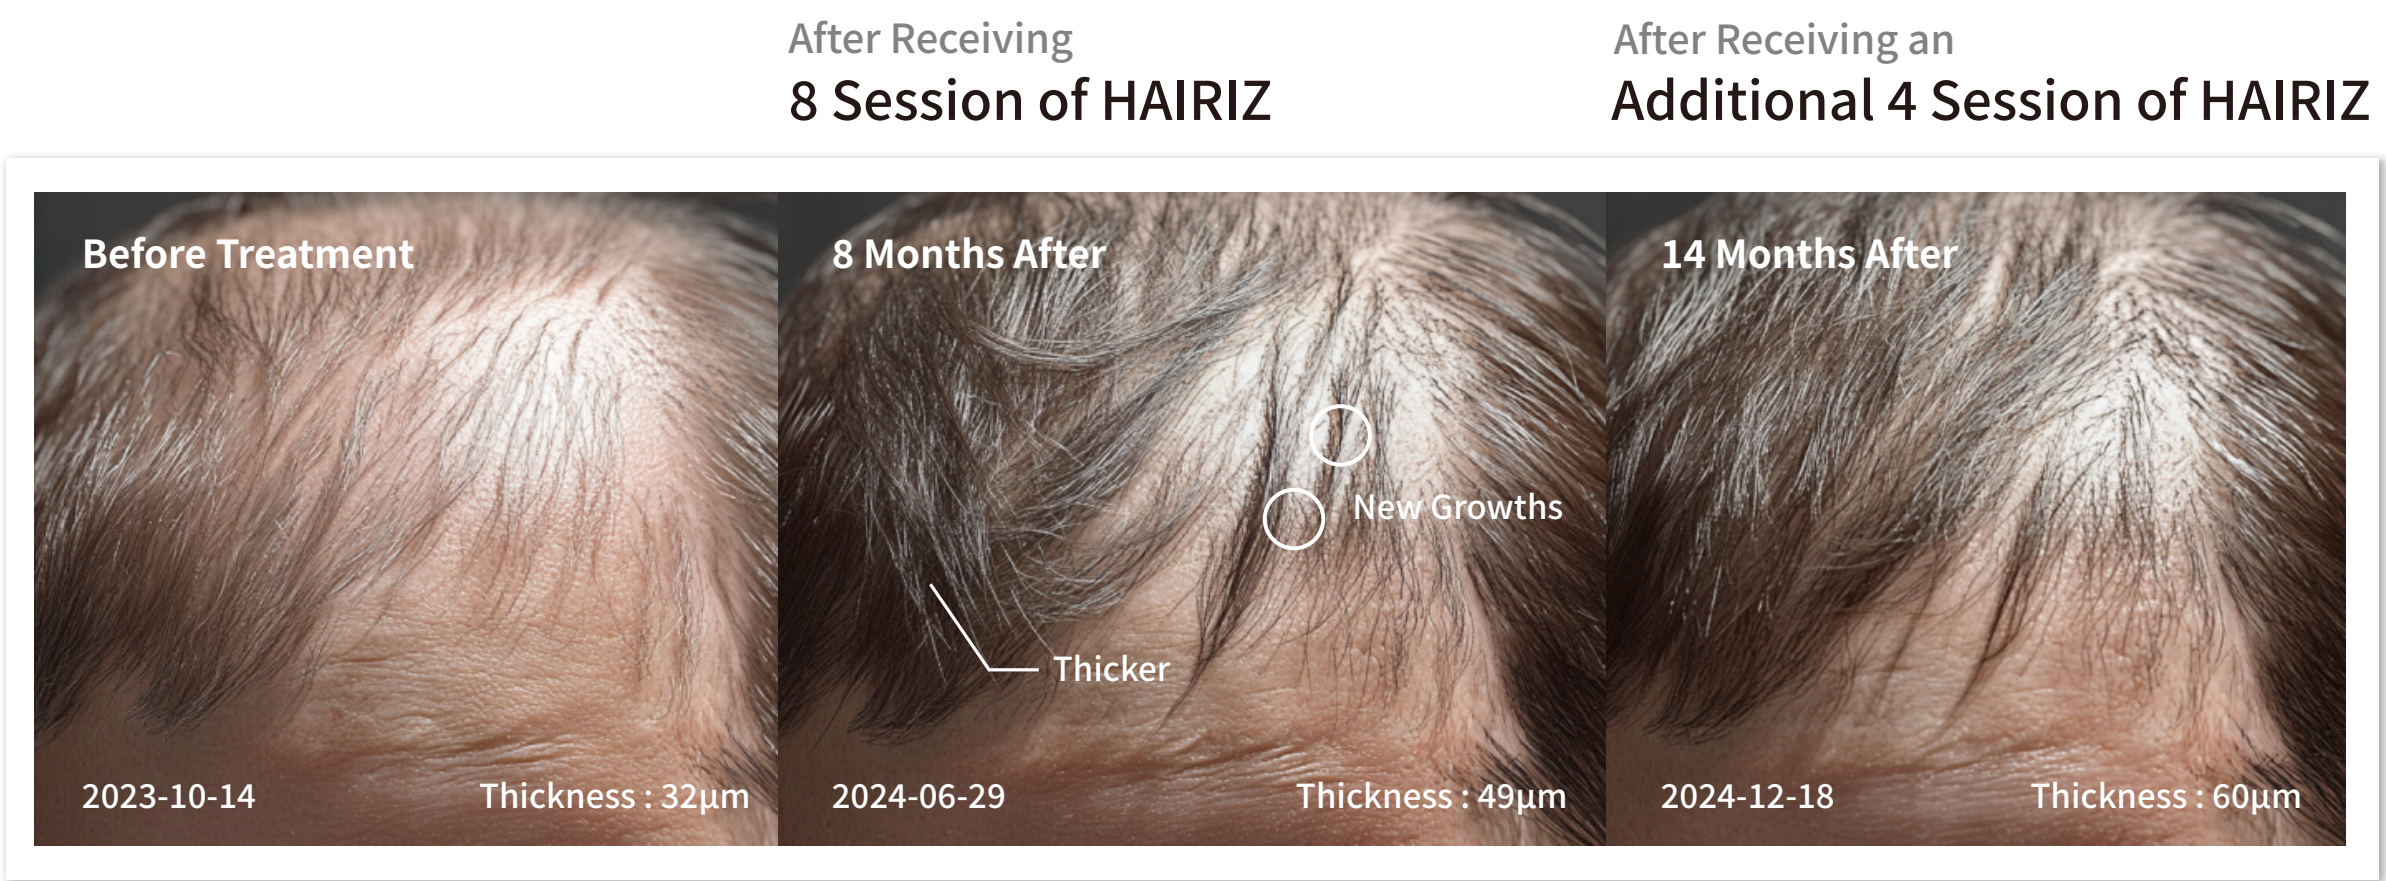

Results of the inflammation response relief test

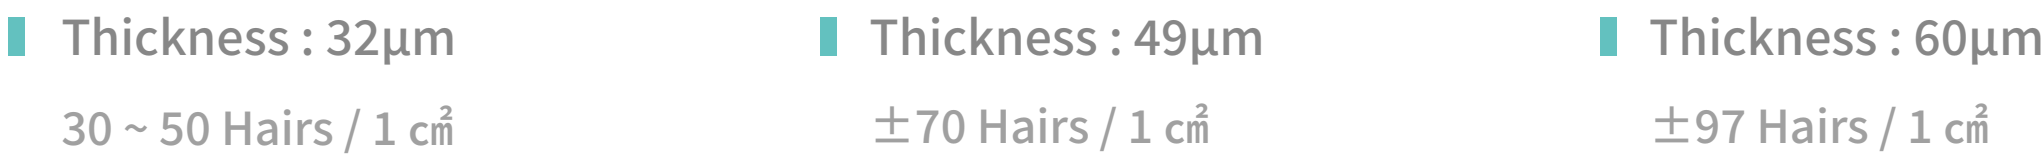

Cell : Human follicle dermal papilla cell (HFDPC)
Samples : Heartleaf Extract
Heartleaf Exosome
Allantoin

Post - Treatment Result

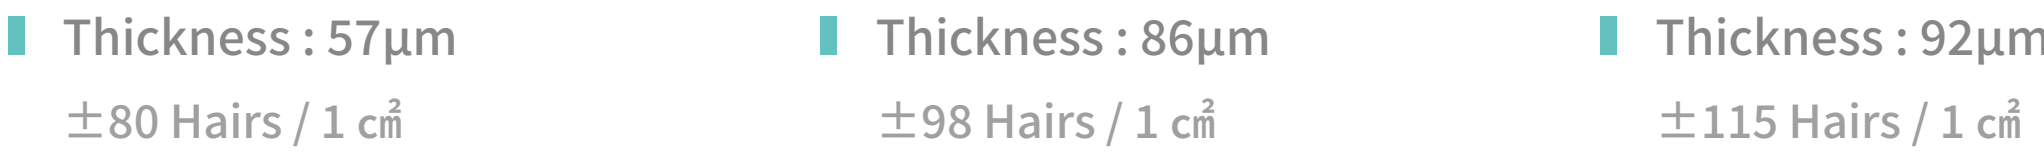

Improvement of Alopecia(51 years old male) 8 months after injection photographed by VISIA-CR
Clinical trials by J Dermatol Treat 2023;90:21-4

A 51-year-old male with advanced hair loss underwent 12 HAIRIZ treatments over 14 months. The results showed that hair thickness, density, and scalp condition all returned to the range of normal hair health.

Improvement of woman(37) Alopecia 9 months after injection photographed by VISIA-CR
Clinical trials by J Dermatol Treat 2023;87:11-37

A 37-year-old female with progressed hair loss underwent 12 HAIRIZ treatments over 13 months. The results showed improved scalp blood circulation, reduced hair loss, and darker hair pigmentation.

Treatment Instruction

Preparing

- Use a [medical cleanser](#) or wash your scalp with [HAIRIZ Scalp Care Shampoo](#) and rinse thoroughly to ensure no shampoo residue remains.
- Use a warm or cool air dryer to completely dry the scalp, preparing it for the procedure.
- Apply topical anaesthetic to the scalp area if required.
- Remove the applied anaesthetic from the area after 15 ~ 30 minutes.
- To prevent infection, sterilise it using an alcohol swab or other aseptic solution.

Sessions

The whole course can be repeated after 5 - 6 months

Main Course	4 sessions, 2 weeks interval
Additional Maintenance Course	4 sessions, 2 weeks interval
Recommended Dosage	2.5 mL / 1 syringe
Injection Technique	Micro-papular injection / intradermal injection
Injection Depth	1 ~ 1.5 mm (Middle layer of Dermis)
Injection Point	10 ~ 15 mm per line (Depends on the area of treatment)
Injection	0.02 ~ 0.05 mL per point
Needle Size	30 - 34 Gauge

Post-Treatment Care

Soothing the injection area with cooling pack or soothing cream

Aftercare & Precaution to the patient

Shampooing

Within 24 hours after the procedure

- Avoid Shampooing

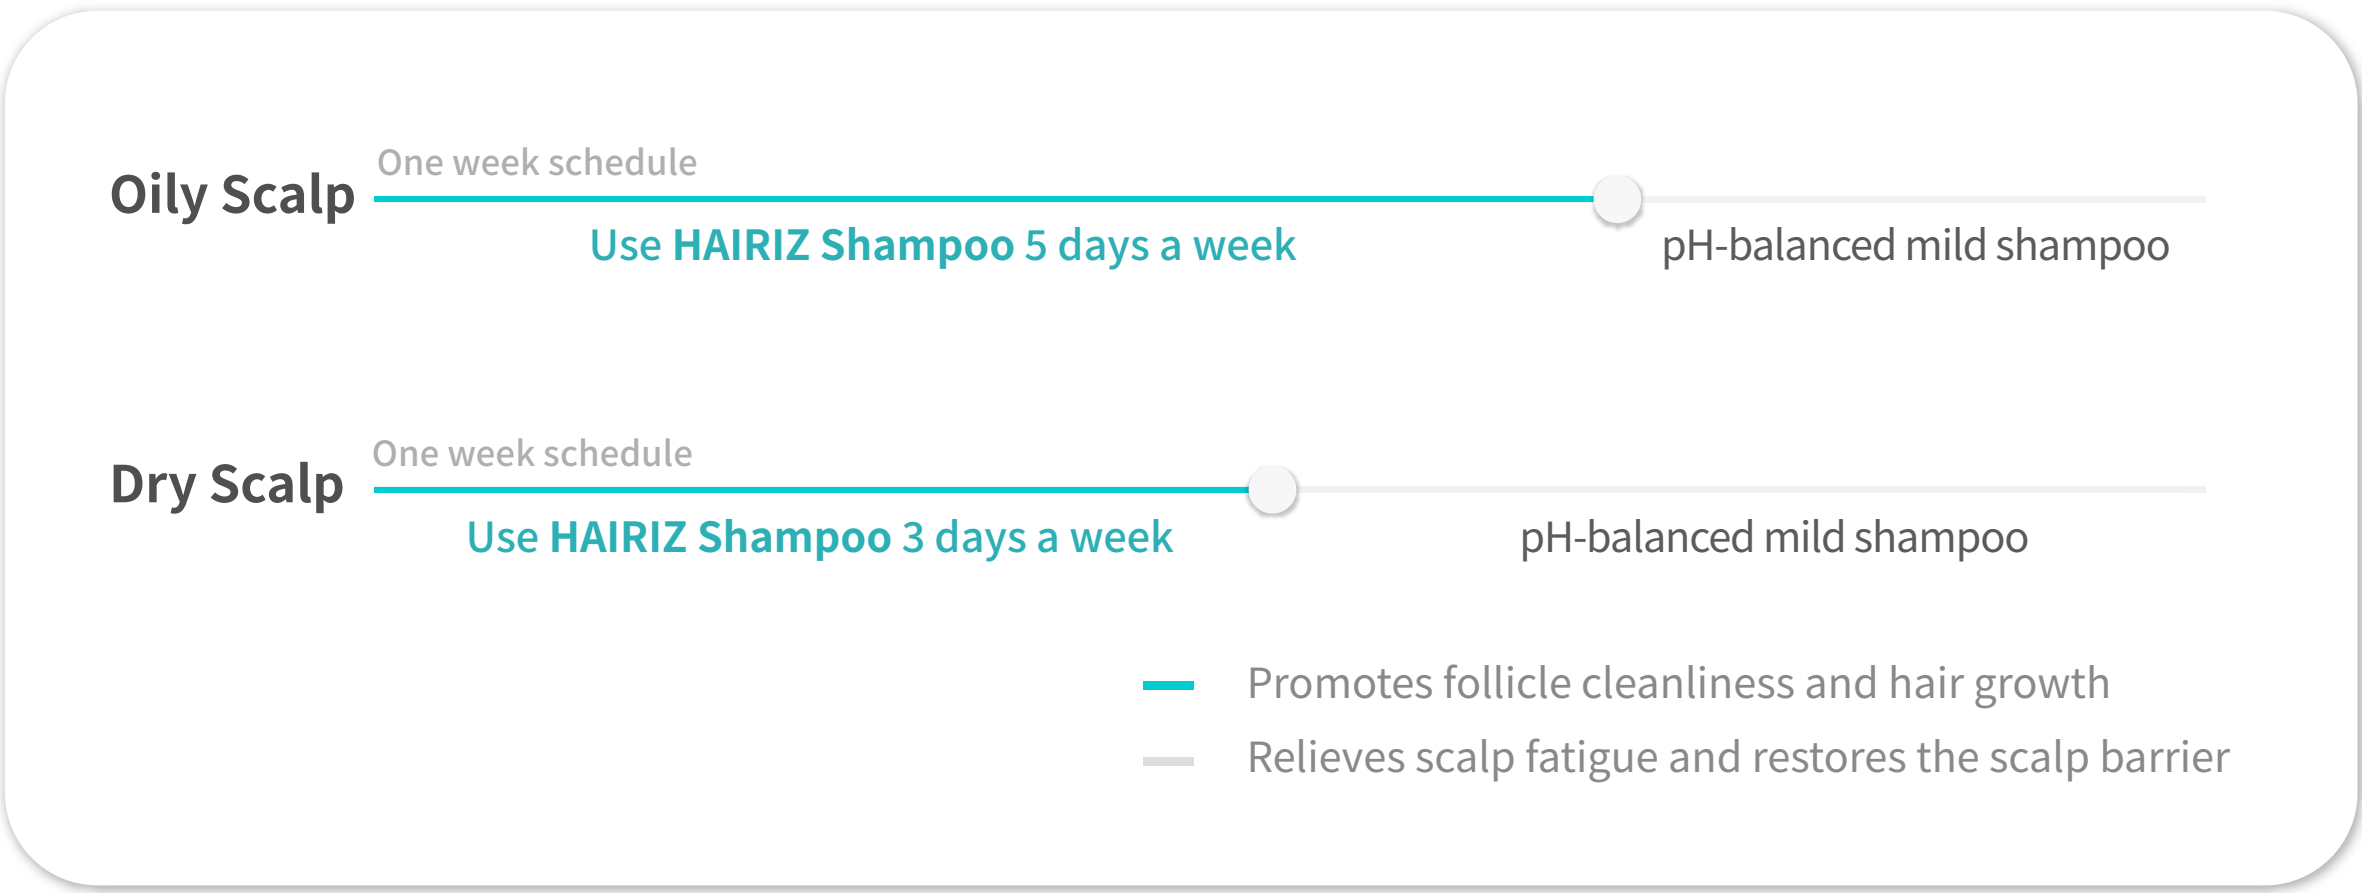

24 to 48 hours after the procedure

- Avoid using strong or non-pH-balanced shampoos.
- Gently massage your scalp with HAIRIZ Shampoo while shampooing. Avoid using your nails.
- Since your scalp may be sensitive and warm, avoid hot water and use lukewarm water instead.

- Your scalp is sensitive, so shampoo for only 30 seconds to 1 minute.
- Ensure all shampoo and residues are thoroughly rinsed out.
- In the final rinsing step, finish with moderately cool water.
- Since your scalp is sensitive, do not rub it with a towel. Instead, gently press to remove moisture.
- Use a hairdryer with cool or mildly warm air, keeping a safe distance from the scalp.

After 2 days post-procedure

- Gradually increase the intensity of your scalp massage while shampooing, depending on the recovery state of your scalp.
- Adjust the shampooing time progressively to 2 to 3 minutes, based on your scalp's sensitivity. For dry scalps, avoid shampooing for longer than 3 minutes.

Precautions

- On the day of the procedure, avoid hot water, saunas, steam rooms, and heat-based drying. If you must be exposed to direct sunlight for an extended period, it is recommended to wear a hat.
- Within 48 hours after the procedure, refrain from consuming alcohol and smoking.
- Within 5 days after the procedure, avoid excessive physical activities that cause heavy sweating.
- Within 2 weeks after the procedure, minimize chemical treatments such as dyeing, perming, or keratin treatments as much as possible.
